Simple Hospital system
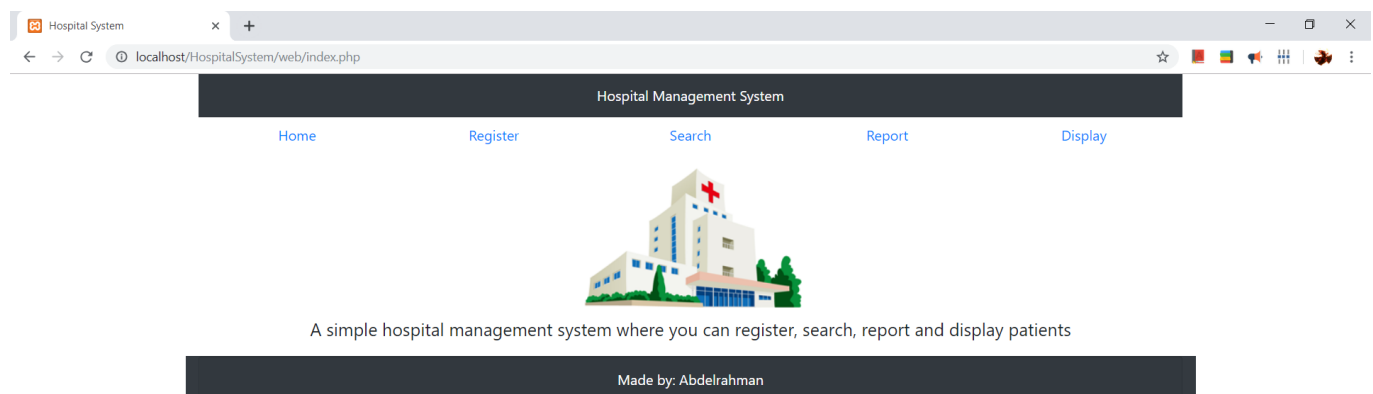

A simple hospital management system where you can register, search or display patients. Built using PHP, JS, HTML, CSS(Bootstrap).

- **Student name**:
  Abdelrahman Ahmed Abdelhameed Abdelhameed Kandil.
- **Program**:
  Computer Science.

Project Structure

- `assets/`
  Where the css, js, images and sql are stored.
- `includes/`
  Where the main php files and html templates are stored
- `web/`
  Where the public homepage are stored. i.e index.php

Usage

- Copy the project folder `HospitalSystem/` to your `xampp/htdocs/` directory

- Run XAMPP's Apache and MySQL

- Go to `http://localhost/phpmyadmin/`

- Create a new database named `hospital`

- Click on `import` tab then click on `browse`

- Navigate to the assets/ folder in the project directory

- Select `hospital.sql` then finish importing

- Go to `http://localhost/HospitalSystem/web/index.php`

Enjoy!

Thanks to Dr. Mohamed Hashim and Dr. Diea

- Click on `import` tab then click on `browse`

- Navigate to the assets/ folder in the project directory

- Select `hospital.sql` then finish importing
